

## Another Great Trade For Our Subscribers! [LIFE](#)

Our [subscribers](#) earned an **8.2% profit** from [LIFE](#)!

In today's market, success isn't about trying to hit a grand slam or score on a hail-mary pass. Instead, it's all about hitting singles and making first downs and doing it over and over again. That's how to get ahead in today's market.

This is how we helped our [subscribers](#) earn their profits in [LIFE](#):

1. [Subscribers](#) receive a current watch list in each newsletter with stocks poised to break free from patterns that have in the past yielded significant short-term gains.

### SUBSCRIBERS ALERTED TO [LIFE](#) AS AN IDEAL LONG SIDE SET-UP IN OUR NEWSLETTER WATCH LIST

When a stock is in an uptrend, it usually forms a series of mini-downtrends as it consolidates its gains before making a new move higher. We call this Pullback Off Highs. This is one of the most bullish long-side set-ups.

When we see this, we draw a pink line connecting the highs of its downtrend. An upside break of the pink line triggers a trade to the long side.

2. When [LIFE](#) triggered a trade by breaking above the pink pullback off highs line at 28.65, we issued a Trade Trigger email alert to our [subscribers](#).

3. As [LIFE](#) was nearing resistance at its old highs, we sent a Locking In Gains email alert to our [subscribers](#) to lock in their gains.
